Brazilian men reporting themselves as black skinned color are at risk for genital dysmorphic disorder.

- Phallocentric societies.

- Sexual taboos and myths.

- Sociologists such as Nelson Inocêncio understand that type of myth as something racist to say because afro-brazilians can be considered sexual instruments. (Carmo JGB, 2007).

- Human penile size were evaluated objectively and subjectively their self-perception of penis size and skin color.
Brazilian men reporting themselves as black skinned color are at risk for genital dysmorphic disorder

• Material and Method:
  – Skin color
  – IMAGE
  – Subjective penis size (SPS)
  – Penis size in maximum manual traction (RLTmax)
Brazilian men reporting themselves as black skinned color are at risk for genital dysmorphic disorder.
Brazilian men reporting themselves as black skinned color are at risk for genital dysmorphic disorder.
